Conference Theme

“The interdependence of the whole world must guide our roadmap.”

These penetrating words were spoken by Isabelle Durant, Deputy Secretary-General, UNCTAD at the United Nations Conference on Trade and Development (UNCTAD15) on October 5, 2021. The CBIAC theme rests upon this belief that countries are interdependent and that aspects of the global economy operate synergistically.

CBIAC gathers business leaders, NGO leaders, researchers, and students to discuss the most pressing issues impacting businesses in African countries. The issues discussed will revolve around the reciprocal impact of businesses, government, and society. The impetus of the conference is the discussions held at UNCTAD 14 and UNCTAD15 (United Nations Conference on Trade and Development) conferences, held in Nairobi, Kenya in July 2016 and Barbados in October 2021.

2025 Theme

In a rapidly evolving world, Global Inclusive Business Development stands at the forefront of creating a sustainable and equitable future. This approach emphasizes the importance of inclusivity in every facet of business, ensuring that growth and progress are shared across all demographics, geographies, and social strata. By embedding inclusivity into the core of business strategies, companies can drive innovation, unlock new markets, and foster economic resilience that benefits everyone, not just a select few.

Central to this vision are strong digital and social pillars. Digital transformation has become the backbone of modern business, enabling unprecedented access to markets, resources, and information. It breaks down barriers, allowing businesses to reach and serve previously underserved populations. By leveraging digital tools and platforms, companies can create more inclusive products and services that cater to diverse needs, driving economic empowerment on a global scale.

At the same time, social responsibility plays a critical role in this development. Businesses are increasingly recognizing their role in addressing social challenges, from inequality to environmental sustainability. A strong social pillar means committing to ethical practices, investing in community development, and ensuring that business operations do not exacerbate social issues but instead contribute to positive change.

Climate Change

Small, developing countries are not the cause of climate change, but they are the ones suffering the most. For many countries, climate change is an existential threat, especially if the 1.5C degree limit of the Paris Accord is not reached. Climate change, trade, and peace are linked. <https://unfccc.int/process-and-meetings/the-paris-agreement/the-paris-agreement>

Sustainable Development

Annually, trillions of dollars in raw materials leave developing countries and are sent to developed countries, making advancement in developing countries unsustainable. There are massive opportunities for FDI into Africa. While exports from developed countries have returned to pre-pandemic levels, exports from developing countries have reached only 6% of pre-pandemic levels. However, intra-Africa trade via The African Free Trade Market and increased multilateralism between Africa and the Caribbean has helped African countries improve. The multilateralism within Africa and between Africa and the Caribbean can increase sustainable development and can pressure large countries to have true global multilateralism.

Entrepreneurship

An important issue for discussion is what are the best methods to encourage entrepreneurship in Africa? The power of large technology companies hinders the work of small businesses and hampers creativity. There is not a global framework for corporate tax for countries to obtain revenue based on the activity that occurs in their countries, which represents an unfair disadvantage against entrepreneurs. Trade is now not just at shipping ports but is conducted digitally, so trade is now in private hands more than ever. This private oligopoly must be addressed if development is to be sustainable and entrepreneurship is to flourish.

Supply Chain

Supply chain problems continue to exist in virtually all industries. Significant pressure exists on supply chains, especially for companies that have single-source suppliers in other countries, such as the chip shortages in Asia negatively affecting automobile production in Europe. Shipping costs are still skyrocketing raising serious inflationary concerns. This inflation negatively impacts food insecurity in SIDS (Small Island Developing States). Problems with production include new industrialization and increasing nationalism.
