"The interdependence of the whole world must guide our roadmap."

These penetrating words were spoken by Isabelle Durant, Deputy Secretary-General, UNCTAD at the United Nations Conference on Trade and Development (UNCTAD15) on October 5, 2021. The CBIAC theme rests upon this belief that countries are interdependent and that aspects of the global economy operate synergistically.

CBIAC gathers business leaders, NGO leaders, researchers, and students to discuss the most pressing issues impacting businesses in African countries. The issues discussed will revolve around the reciprocal impact of businesses, government, and society. The impetus of the conference is the discussions held at UNCTAD 14 and UNCTAD15 (United Nations Conference on Trade and Development) conferences, held in Nairobi, Kenya in July 2016 and Barbados in October 2021.

2026 Theme:

Africa as the Wellspring of Innovation, Entrepreneurship, and Engineering

Throughout the more than fifty countries on the African continent, the growth of innovation, entrepreneurship, and engineering is accelerating. This acceleration is occurring because business leaders, entrepreneurs, and engineers in developing economies are not hindered by the presence of vast, embedded infrastructures and processes; this independence allows them to be highly creative and innovative. Developing economies also provide a plethora of opportunities for entrepreneurs to detect unmet customer needs and to create businesses to meet those needs. Likewise, developing economies offer significant opportunities for innovation in engineering to meet the needs of businesses, infrastructure, and society. Africa's rapid economic development, combined with substantial population growth, the low median age of the labor force, and increases in post-secondary educational attainment, make African countries the epicenter of innovation, entrepreneurship, and engineering.

Climate Change

Small, developing countries are not the cause of climate change, but they are the ones suffering the most. For many countries, climate change is an existential threat, especially if the 1.5C degree limit of the Paris Accord is not reached. Climate change, trade, and peace are linked. <https://unfccc.int/process-and-meetings/the-paris-agreement/the-paris-agreement>

Sustainable Development

Annually, trillions of dollars in raw materials leave developing countries and are sent to developed countries, making advancement in developing countries unsustainable. There are massive opportunities for FDI into Africa. While exports from developed countries have returned to pre-pandemic levels, exports from developing countries have reached only 6% of pre-pandemic levels. However, intra-Africa trade via The African Free Trade Market and increased multilateralism between Africa and the Caribbean has helped African countries improve. The multilateralism within Africa and between Africa and the Caribbean can increase sustainable development and can pressure large countries to have true global multilateralism.

Entrepreneurship

An important issue for discussion is what are the best methods to encourage entrepreneurship in Africa? The power of large technology companies hinders the work of small businesses and hampers creativity. There is not a global framework for corporate tax for countries to obtain revenue based on the activity that occurs in their countries, which represents an unfair disadvantage against entrepreneurs. Trade is now not just at shipping ports but is conducted digitally, so trade is now in private hands more than ever. This private oligopoly must be addressed if development is to be sustainable and entrepreneurship is to flourish.

Supply Chain

Supply chain problems continue to exist in virtually all industries. Significant pressure exists on supply chains, especially for companies that have single-source suppliers in other countries, such as the chip shortages in Asia negatively affecting automobile production in Europe. Shipping costs are still skyrocketing raising serious inflationary concerns. This inflation negatively impacts food insecurity in SIDS (Small Island Developing States). Problems with production include new industrialization and increasing nationalism.

- I am known to be strategically minded leader with a passion for innovation. After years of developing operational excellence and being blessed with a passion for knowledge, I transitioned into a strategic force armed with intimate details of operations. My strength is my persistence in striving to achieve superior levels of emotional intelligence. During this journey, I developed a stronger understanding of myself and off others allowing me to drive performance in any function I occupy. Currently I am the Deputy Registrar of the National Consumer Tribunal, an organization that adds real-value to the South African economy and its people. The ability to play a role in the betterment of South Africa is a strong motivator for me. Through my experience at Tribunal I have developed into an expert in the consumer law and general management. I have a proven track record of excelling throughout my career-history and the reason for this, is that I will only work for companies whose purpose and values align with mine... whilst I have the choice...
